CREATIVE CONNERS

Creative Connors, Inc. makes a range of motor control products that are used in live theatrical performances. Our Stagehand™ motor controllers allow synchronized motion of dozens of set pieces on a stage to be executed by a single Windows PC. A show may have winches that drag scenery across the stage, lifts that bring sets up from the basement, or backdrops that are hauled out of audience view. To make those movements seamless & consistent, we place one of our Stagehand™ controllers next to each motor in the theatre. These controllers are networked together and can be operated remotely by a single technician.

THE PROTOCASE EXPERIENCE

"The product that Protocase helped us produce most recently, the Stagehand Mini™, is most often used to control the hydraulic valves for large stage elevators. Over the past few years, we have come to rely on Protocase to help us

meet our tight timelines with precision and polish. Their attention to detail and great service is instrumental in our ability to fill orders on time. I look forward to using Protocase for years to come."

- Gareth Conner
